About me

I'm a Computer Science student at UNICAM with solid foundations in computer science, such as algorithms, data structures, and software engineering. I love exploring the world of computing and have developed full-stack web applications and Java-based systems. I'm particularly fascinated by machine learning and AI development, and I'm eager to deepen my skills and tackle challenging problems in a dynamic environment like EPFL.

Matteo Vittori

Education

UNICAM, ITALY

COMPUTER SCIENCE – School of SCIENCE and TECHNOLOGY

Expected Graduation: **July 2026**

Relevant Coursework & Results:

- Probability and Statistics: 30L
- Algorithms and Data Structures: 30L
- Fundamentals of Computer Science: 30
- Advanced Programming Paradigms: 29
- Databases: 27

Projects

UniStays – Student Housing Platform

[Repo](#) [Demo](#)

- Developed full-stack platform for student housing, from idea to near-public release
- Designed UI/UX, JS frontend & backend, API integrations (Firebase, Google Maps, Clerk, GA4)
- Implemented analytics dashboard, real-time chat, and listing management
- Focus on modularity, scalability, and product-first thinking

Hackathon Management System

[Repo](#)

- Backend system managing full lifecycle of hackathons (Java, Spring Boot, Maven, H2 DB)
- Applied Clean Architecture, SOLID principles, design patterns
- Developed event-driven system with scheduler, notifications, domain listeners
- Designed frontend for testing and verification
- Visual modeling with Visual Paradigm (use case, class, sequence diagrams)

Access Control Unit – Embedded Systems

[Repo](#) [Demo](#)

- Arduino Nano project: low-power access controller triggered by proximity
- Morse code input for unlocking or alarm activation, advanced energy saving with interrupts
- Sensors: HC-SR04, 7-segment display, buzzer, relay control
- Languages: C for embedded, real-time logic, system-level design
